

[See **POLICY ALERT No. 212**]

7424 BED BUGS

The Board of Education is concerned for students who may have bed bugs in their home with the potential for these students to bring bed bugs into the school building. Bed bugs can be transmitted from one location to another in backpacks, clothing, books, and other items. A bed bug infestation is unlikely in a school and the Board adopts this Policy as a proactive action to prevent infestation and to stop bed bugs from spreading within the school setting if a bed bug is transmitted into a school.

Bed bugs are parasitic insects that feed exclusively on blood and are mainly active at night, but are not exclusively nocturnal. A common bed bug prefers human blood and typically feeds on their hosts without being noticed. Bed bugs are not known to transmit disease, but cause reasonable distress and health concerns for many people. The presence of bed bugs in a home does not mean the home is unclean, bed bugs can be found in any home.

Bed bugs typically do not infest people as they hide during the day and come out during the night. Bed bugs are attracted to humans primarily by carbon dioxide, warmth, and by some chemicals. Bed bugs prefer exposed skin, preferably the face, neck, and arms of a sleeping person. Bed bug bites may lead to a range of skin manifestations from no visible effects to prominent blisters. The bite usually produces a swelling with no red spots, but when many bugs feed on a small area, reddish spots may appear after the swelling subsides. Effects also may include skin rashes, psychological effects, and allergic symptoms.

Any staff member who observes what may be bed bug bites on a student shall send the student to the school nurse. The school nurse shall examine the student to determine if there are any bed bugs present on the student or if the bites may be bed bug bites. The school nurse will inform the Principal and contact the student's parent on the results of the examination.

In the event the school nurse observes what appears to be a bed bug on the student or on the student's possessions, the school nurse will inform the Principal who will arrange for a licensed pest management professional to complete an inspection of the student's classroom(s) to determine if bed bugs are present in the classroom area. If a licensed pest management professional cannot complete an inspection within twenty-four hours of the request from the school district, the district custodial staff will vacuum the student's classroom(s) with a vacuum cleaner using a new vacuum cleaner bag and when finished the staff member shall seal the bag and discard it in a receptacle outside the school building. If the vacuum does not have a bag, the contents of the vacuum shall be emptied into a secure plastic bag, sealed, and discarded into a receptacle outside the school building. The Principal shall determine if the classroom(s) should be occupied by staff and students until the inspection by a licensed pest management professional is conducted.

In the event the inspection determines bed bugs are in the school, the area(s) where bed bugs have been found or could be found will be treated by a licensed pest management professional.

The parent of any student who is found to have a live bed bug on them will be contacted by the school nurse and the parent will be required to pick-up their child to arrange for the child to return home to change clothes and to inspect any items the student brings to school. Upon the student's return to school, the student will be required to report to the school nurse who will examine the child and the child's possessions. If there are no signs of bed bugs on the student or in or on the student's possessions, the student will be able to resume their school day. The school nurse may determine to examine the child subsequent to their initial return to school to ensure the student and possessions are free of bed bugs. In the event the nurse finds live bed bugs on the student or in or on the student's possessions upon the student's initial return to school, or upon any subsequent examination by the school nurse, the school nurse will contact the parent and require the parent to pick-up the student from school.

The Principal, in consultation with the school nurse, will determine if the parents of other students should be informed of the presence of bed bugs in an area of the school where their child may have been or is during the school day. This determination will be made on a case-by-case basis. Parents of other students may not be informed if bed bugs are found on a student or in or on the student's possessions, and are not found in the school building. The school district will comply with all notification requirements and other requirements of the New Jersey Pest Management Act, the district's Pest Management Plan, and any other applicable law.

Any student suspected of having bed bugs in their home or on or in their possessions will be treated with discretion, dignity, and respect. The district will offer the student counseling, if needed. The Principal or designee will work sensitively with parents of any student living in an infested home to develop strategies for preventing the further spread of bed bugs.
