GO GREEN WITH LED

ENERGY EFFICIENT LIGHTING

LEDs are more energy-efficient than any other lighting technology on the market. They are mercury free and are recyclable, making them an excellent choice when looking for energy-efficient options.

Replacing incondescent and fluorescent lighting with LED technology will save you money and energy while making your facility more sustainable.

REDUCE GREENHOUSE GAS EMISSIONS

According to the U.S. Environmental Protection Agency, replacing one light bulb with an ENERGY STAR rated one in every American home would reduce greenhouse gas emissions by 9 billion pounds, or approximately the amount emitted from 800,000 cars.

Earth Day is a global movement that encourages 200 million people in 141 countries to make a difference to protect our environment for future generations.

LEDs, especially **ENERGY STAR®** rated products, use at least 75% less energy and last 25 times longer than incandescent lighting.
